Profile

Graduate in Management Engineering and currently pursuing a Master's degree in Digital Transformation Management, with a strong interest in data science, data analytics, and digital innovation. Analytical and proactive, with a solid technical and business background and a strong commitment to continuous learning in international contexts.

Education

Alma Mater Studiorum - Università di Bologna *Cesena, Italy*
MSc in Digital Transformation Management (LM-91) *Sept 2025 – present*
The course, taught in English, aims to train interdisciplinary professionals - with skills in both the IT and economic-organizational fields - capable of realizing and governing the companies' digital transformation process.
The course offers a multidisciplinary training with a solid theoretical and empirical basis for in-depth analysis, with a constant focus on comparative and international perspectives.
Digital transformation managers work in the planning, design, development and management of digital innovation projects and processes in all production and research sectors; from agriculture to manufacturing to services.

Università degli studi della Repubblica di San Marino *Repubblica di San Marino*
BSc in Management Engineering (L-9) *Sept 2022 – Oct 2025*
The course aims to provide a solid basic scientific preparation with an overview of technical and engineering methods for solving problems in the professional field of management engineering.
Graduates will be equipped to work in diverse and specialized areas, including business process re-engineering, decision support system development, the design of organizational systems, supply chain management, planning and control systems, project management, production and distribution, quality and safety management, industrial and service marketing.

Università degli studi di Parma *Parma, Italy*
BSc in Management Engineering (L-9) *Feb 2025 – July 2025*
Double Degree UNIRSM and UNIPR

ISISS Tonino Guerra *Novafeltria (RN), Italy*
High School Diploma in Liceo Scientifico *Sept 2017 – June 2022*

Experience

Waiter *Rimini, Italy*
Various *Apr 2021 – present*
Managed customer service in high-volume environments, developing strong communication and problem-solving skills.

Projects

DTM Database Systems project: Soccer Tournament Database *Dec 2025*
This project was developed as part of the Database Systems exam for the Master's Degree in Digital Transformation Management at the University of Bologna.
It implements a relational database for a soccer tournament, storing information about players, teams, matches, leagues, referees, and contracts.
It demonstrates the use of SQL for creating tables, inserting data, and running queries to analyze player performance, match history, and referee assignments.
- SQL

Certifications

C1 Advanced - Score 184 *Dec 2024*

Cambridge University Press & Assessment

Certification in English proficiency by Cambridge Assessment English, demonstrating advanced skills in communication, comprehension, and writing.
Recognized for achieving level C1 in alignment with international standards.

CS50P: Introduction to Programming with Python *Nov 2026*

Harvard Online

An introduction to programming with Python, covering fundamental concepts including variables, functions, conditionals, loops, exception handling, libraries, unit testing, file I/O, regular expressions, and OOP.
The course emphasizes problem solving, code organization, testing, and writing reliable, maintainable, and well-tested Python programs.

CS50x: Introduction to Computer Science *Sept 2026*

Harvard Online

A comprehensive introduction to computer science and programming.
The course covers fundamental concepts such as algorithms, data structures, memory management, software development, databases, and web development, using C, Python, SQL, HTML, CSS, JavaScript and Flask.
It develops strong problem-solving skills and provides a broad foundation in computer science.

Elements of AI: Building AI *Mar 2025*

University of Helsinki

This short course dives deeper into artificial intelligence, focusing on building AI systems.
It covers advanced topics like supervised and unsupervised learning, neural network design, and real-world implementation, offering practical skills for creating AI applications (using Python).

Elements of AI: Introduction to AI *Dec 2024*

University of Helsinki

This short course covers the fundamentals of artificial intelligence, including machine learning, neural networks, and practical applications.
It also addresses ethical challenges and societal impacts, providing a comprehensive introduction to this transformative field.

Boolean Data Week *Nov 2023*

Boolean Careers

An 8-hour introductory course on data analytics for beginner, focusing on Google Sheets, Python fundamentals and Tableau visualization, with an emphasis on how these tools integrate and work together.

Skills

Main: Python, SQL, Machine Learning, Business Analytics

Lingue: Italian (mother tongue), English (advanced)
